

LEARNING BY DOING

Beckett

What about timing?
Impact should be measured at different intervals...

Impact might be immediate or a slow burn...

Framework easier to use at individual level

Tool is hard to grasp...

Think about where you are looking for impact... keep the balance

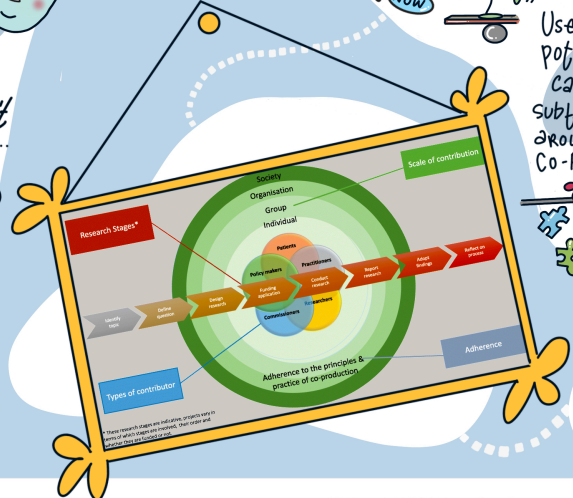

Useful tool... potential to capture subtleties around Co-Production

How do we capture the less tangible impact?

How do we capitalise?

Adapted from: Beckett et al. 2018

No voice baseline... a little too linear... no room for personal experience

Pause and think in a way of reflecting back to "voice"...

We must listen to all voices...

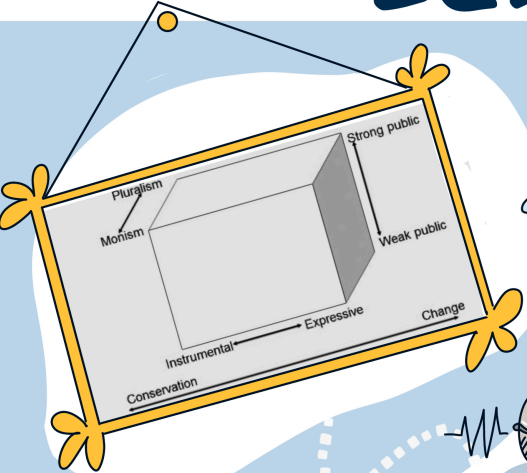

What about the balance? Voices shouldn't or can't always be equal... Can they?

It provides a good snapshot view... it's simplistic but promotes thinking

A little subjective yet useful despite no common starting place...

Gibson
