Eastern Academic Research Consortium (EARC) and the University of Kent, in partnership with the Sainsbury Centre, are delighted to present Dust to Dust: Redesigning Urban Life in Healthy Soils.

Curated by
Benjamin Vis
Dan Evans
Christian Isendahl
Elizabeth Graham

Dust to Dust: Redesigning Urban Life in Healthy Soils began as an urban design ideas competition issued by the international AHRC-funded network Pre-Colombian Tropical Urban Life (TruLife): Placing the past in designs for sustainable urban futures. Teams from several countries were selected to develop their proposals for urban development collaboratively. The results are exhibited here. Taking inspiration from basic principles of urban design practiced by the ancient Maya, the relationship between soil management and urban life is given centre stage in schemes that inspire to improve the long-term sustainability of cities worldwide.

Dust to Dust is supported by
